In a data warehouse, a measure is a property on which calculations (e.g., sum, count, average, minimum, maximum) can be made.

Measure (data warehouse) - Wikipedia

A dimension is a structure that categorizes facts and measures in order to enable users to answer business questions. Commonly used dimensions are people, products, place and time.. (Note: People and time sometimes are not modeled as dimensions). In a data warehouse, dimensions provide structured labeling information to otherwise unordered numeric measures.

Dimension (data warehouse) - Wikipedia

A data warehouse begins with the data itself, which is collected from both internal and external sources. Data is typically stored in a data warehouse through an extract, transform and load (ETL) process, where information is extracted from the source, transformed into high-quality data and then loaded into a warehouse.

5. Agile Architecture at Scale. On large agile teams, geographically distributed agile teams, or for enterprise-wide architectural efforts, you will require an Architecture Owner team or Enterprise Architecture team (in Agile Modeling I originally called this a core architecture team, a term I never really liked). Large agile teams are often organized into smaller subteams, as you can see in ...
